

Environmental Biotech Now Offers Full Pump Engineering Capacity

Environmental Biotech, the Essex based international wastewater systems provider, has expanded its service offer to include pump engineering capacity through the acquisition of M&M Asset Maintenance Ltd based at Raligh near Southend.

M&M provide a comprehensive in-house maintenance engineering service for commercial fluid pumps, electric motors and complete fluid control systems. M&M

will design, manufacture, install and maintain complete fluid handling systems for the water, sewage and manufacturing industries.

M&M provide a specialist lubrication service to enhance process equipment reliability and has a mechanical engineering division that builds and maintains process equipment for industry backed by a fully equipped 4000sqft workshop facility for fabrication, welding and machining. M&M

also makes and installs a wide range of Health & Safety equipment such as barriers, CRP and slip walkway and safety stairs.

"M&M adds a further closely integrated capacity to the Environmental Biotech service offer. We work ever more closely with wastewater utilities providing tailored solutions for problem sewage systems where pump maintenance is also an essential requirement. Now with M&M capacity we provide a one-stop-service with our remedial expertise and specialist engineering abilities," says Andy Tappin, Managing Director of the Environmental Biotech Group. <
