

Dallas Airport sold on Environmental Biotech trial results

As the Heathrow Terminal 5 start-up issues have recently revealed, an airport's systems need to flow properly to avoid the whole place fouling-up creating a PR disaster and extra expense; wastewater and restrooms are another part of that delicate system. As thousands of people pass through airports each day using the bathroom facilities, there is a pressing need to make sure the toilets stay clean and hygienic, do not smell and that pipes do not get blocked.

An expert in environmental plumbing solutions, Essex-based Environmental Biotech has the answer and recently conducted successful demonstrative trials of its Fresh Flow and Urine Oust! products in Dallas Airport (U.S.A.). The results proved to the airport's management that a cost saving of over US\$100,000 could be returned after just two years of using the products. 150 units have now been installed throughout two terminals of this busy international airport.

Flow Fresh is a treatment solution for urinals. It is based on friendly bacteria and enzymes that digest uric acid crystals and so eliminate the odour of stale urine. Administered by a drip dispenser it removes mineral build-up on the porcelain whilst deodorising and clears uric crystal build up in the pipes. This cost effective, easy to install and maintain solution to blockages and odours removes the need for de-scaling.

Urinals pipes show marked improvement after only 45 days of treatment. During the trial period, the facilities were being used as normal. The results are startling; besides overall odour reduction, the pictures speak volumes in the reduction of blockages.

Urine-OUST! is a high performance, bio-enzymatic solution that uses microbes to attack the urine crystals and is already widely used in environments such as airport concourses, schools, bus terminals, washrooms and pubs. Importantly, it is not a disinfectant; other cleaners tend to clear some of the urine and then mask the smell with a stronger fragrance. Urine-OUST! completely removes the urine smell and stain. Breaking down the urine crystals eliminates the source of the problem to get rid of smells for good.
