FOR IMMEDIATE RELEASE

**RESTAURANTS & HOTELS NOW HAVE ECO-FRIENDLY SOLUTIONS
FOR THEIR LEAK, SEWER, GREASE & ODOR PROBLEMS**

**American Leak Detection, Inc. and Environmental Biotech Inc.
Partner to Offer More for Commercial Businesses**

Palm Springs, California (October 23, 2007) – Restaurants and hotels, along with other commercial businesses, can now get cost effective and eco-friendly solutions to their leak, sewer, grease and odor problems as a result of a recent business alliance formed with American Leak Detection (ALD) and Environmental Biotech (EBI). ALD and EBI's alliance offers businesses a wide range of environmentally friendly products and services to solve their inherent problems.

The partnership of ALD, the leading brand in non-invasive leak detection services, and EBI, a United Kingdom and United States-headquartered leader in drainage and odor solutions, includes a vision for a "one-stop-shop" for environmentally friendly products and services applicable to commercial businesses, as well as municipalities.

"Restaurants and hotels typically struggle with ongoing issues related to leaks, grease, drainage, and odor. ALD and EBI can now offer to these businesses cost effective solutions to their problems that will not harm the environment or infrastructure," says Stan Berenbaum, President and CEO of American Leak Detection.

Companies such as McDonald's have already benefited from EBI's range of environmentally friendly products and services that eliminate fats from drains and solve other wastewater and odor problems. Many of EBI's products and services are based on microbes that eat noxious substances, typically leaving behind nothing more than carbon dioxide and water. The process is called bio remediation and it is both more environmentally friendly than conventional solutions (harsh chemicals and drain company call-outs) and more cost effective.

"One unfortunate by-product of food processing is the reality that waste composites corrode pipes and sewer lines. It really is the equivalent of heart disease for our collective infrastructure body," says Aziz Tejpar, President of EBI. "We look forward to continuing our leadership in environmentally friendly solutions for commercial businesses to solve drainage, grease, and odor problems which is a growing issue around the world. We're proud to offer revolutionary products that can solve the problems and also have a significant positive impact on our water and land quality for the future."

ALD and EBI anticipate a variety of updates as their alliance grows, including a plan to work together in building a brand under the logo and concept of "B Environmental." The B Environmental program focuses on cleanliness, hygiene, and odor control and takes us from reactive to proactive by proposing a multitude of solutions for residential, commercial and municipal markets – from retail in-home products to on-going maintenance solutions for commercial businesses and municipalities.

The alliance of ALD and EBI is further strengthened by their association with Yale University at PlainSight Systems, ALD's parent company. PlainSight was founded by a world-wide team of mathematicians, scientists and engineers centered at Yale who develop and sell proprietary products and license technology to Fortune 500 companies. "Our Yale-trained technologists are fully committed to supporting the ALD and EBI product roadmap, especially in engineering a pro-active monitoring approach with the use of smart sensors," says Dr. Patrick DeSouza, CEO of PlainSight Systems.

About American Leak Detection

American Leak Detection is the world leader in the accurate, non-destructive detection of all types of leaks including hidden water and sewer leaks. From swimming pool cracks to concealed plumbing systems, the smallest leak is located with the most advanced, sophisticated electronic devices - without bashing holes in walls or digging up the deck and yard. American Leak Detection sets the standard for non-invasive leak detection and repair with proprietary methods and technology. Founded in 1974, it now operates a network of highly trained Original Leak Specialists on six continents. For the last six years, American Leak Detection has been ranked #1 in Entrepreneur® magazine's "Maintenance Products and Services" franchise sector. For more information on American Leak Detection, call 800.755.6697 or visit www.americanleakdetection.com.

About Environmental Biotech

Environmental Biotech, is one of the fastest growing companies in its sector providing affordable, long-term solutions to drainage (sewer grease and odor) problems for large blue-chip organizations, councils and water companies alike. EBI products and services provide authorities and supporting research bodies in taking appropriate steps to help tackle today's most problematic sewerage issues. While highlighting the need to educate not only the industry sector, but also the wider business and public communities on the problems of FOG, EBI continues its mission to educate on best practices to resolve some of the worst FOG issues around the world. For more information on Environmental Biotech, call 941-358-9112 or visit www.environmentalbiotech.com.
