

Environmental Biotech UK

An expert in environmental plumbing solutions, Essex-based **Environmental Biotech** has the answer and recently conducted successful demonstrative trials of its Fresh Flow and Urine Oust! products in Dallas Airport (USA). Flow Fresh is a treatment solution for urinals. It is based on friendly bacteria and enzymes that digest uric acid crystals and so eliminate the odour of stale urine. Administered by a drip dispenser it removes mineral build-up on the porcelain whilst deodorising and clears uric crystal build up in the pipes. Urine-OUST! is a high performance, bio-enzymatic solution that uses microbes to attack the urine crystals and is already widely used in environments such as airport concourses, schools, bus terminals and washrooms.
